

The idea is to take 224 and knock big chunks of 6 out of it.

$$\boxed{224} \div \boxed{6} = \boxed{}$$

Keep track of the chunks of 6

Subtract those chunks from \rightarrow 224

$$\boxed{10} \times \boxed{6} = \begin{array}{r} \\ - 60 \\ \hline \end{array}$$

$$\boxed{10} \times \boxed{6} = \begin{array}{r} \\ - 60 \\ \hline \end{array}$$

$$\boxed{10} \times \boxed{6} = \begin{array}{r} \\ - 60 \\ \hline \end{array}$$

$$\boxed{7} \times \boxed{6} = \begin{array}{r} \\ - 42 \\ \hline \end{array}$$

$$+ \boxed{} \times \boxed{} = \begin{array}{r} \\ - \\ \hline \end{array}$$

$$\boxed{37 \text{ r.} 2}$$

Answer

\hookrightarrow 37 chunks of 6 in 224 with 2 individual parts left over.

\rightarrow Too small to knock 6 out of
